# Welcome to the Computer!

The first thing to understand is that it's difficult to "break" a computer.

They are designed to recover from most things a user does to them with a few clicks.

If you experience a problem that you can't fix, you can:

- Ignore the problem (and it might resolve itself)
- Restart the computer
- Just turn off the computer until you can get help

Many new computer users worry about breaking the computer but its actually difficult to truly break it. So relax!

# Types of Computers

---

Earbuds/headphones

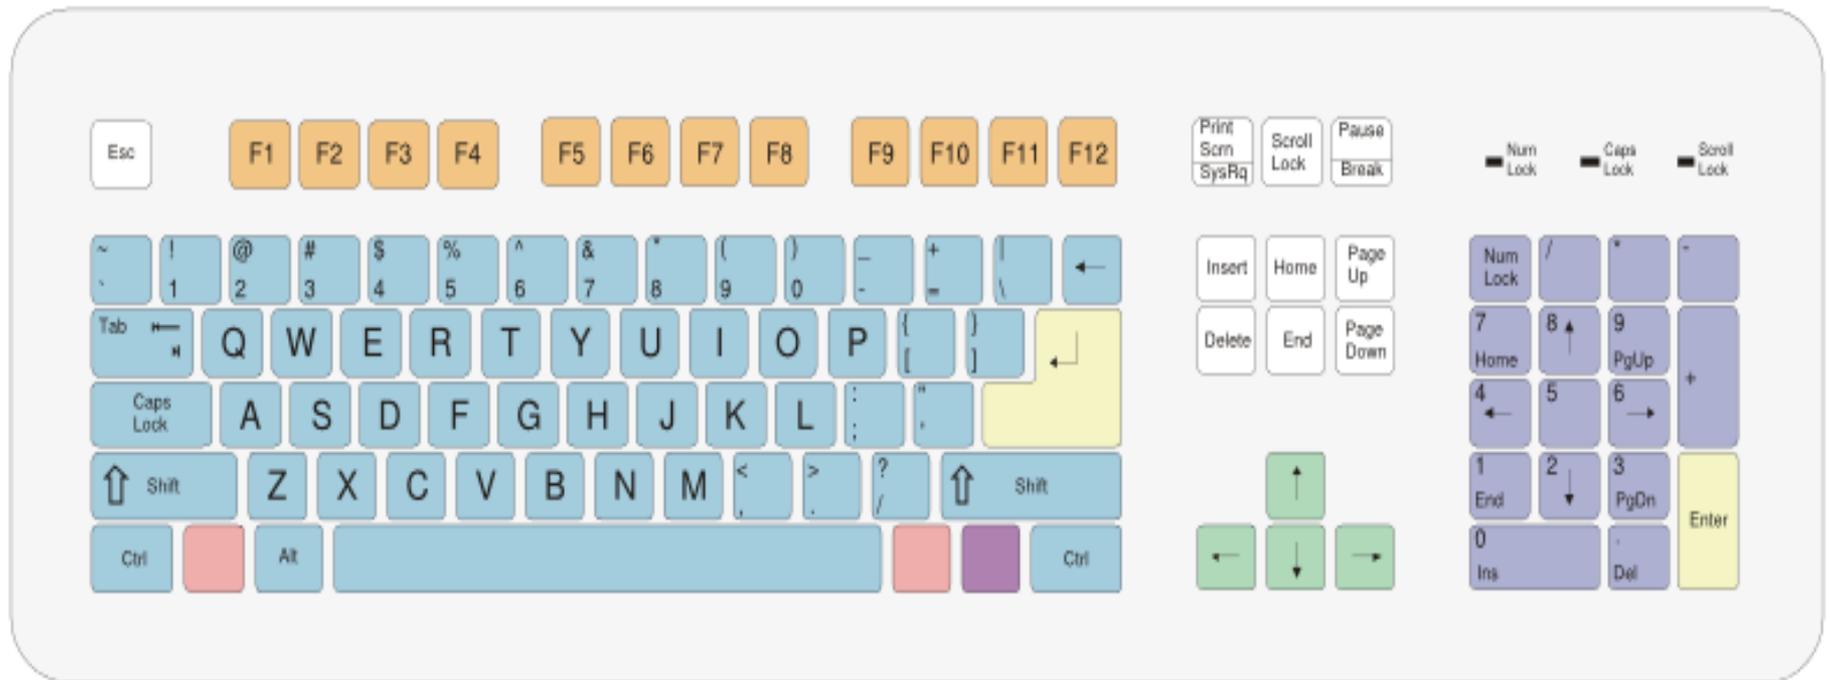

External hard drive  
Extra space/memory for  
storing your files

USB/Flash/Thumb  
drive

For saving your files while  
on the go

# Computer Accessories

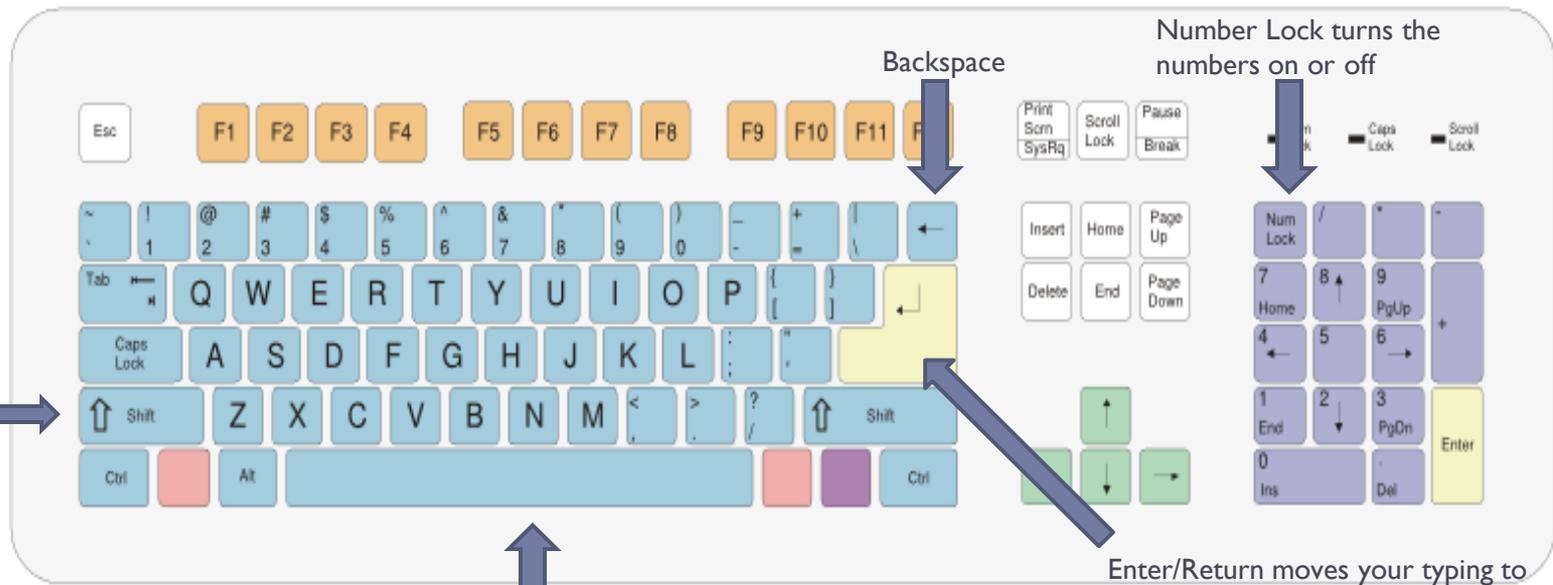

- Typewriter keys
- Windows keys
- Application key
- Function keys
- Numeric keypad
- Cursor control keys
- Enter keys
- Other

You use the keyboard to “write” something on the computer

# The Keyboard

Capitalizes letters and creates symbols

Backspace

Number Lock turns the numbers on or off

Space bar adds a space between words

Enter/Return moves your typing to the next line

- Typewriter keys
- Function keys
- Enter keys
- Windows keys
- Numeric keypad
- Other
- Application key
- Cursor control keys

# Important Keys

The mouse is used as a virtual finger for pointing, selecting, and moving items on your computer

Left click – selects

Right click – opens a menu

Double click – opens a program

Click and drag – organizes items

The arrow points

The cursor lets you type

The hourglass means wait

The hand lets you select a link

# The mouse

# What is an Operating System?

You might have heard the terms iOS or Windows. Maybe you've even hear the terms Windows XP or Mountain Lion. These are Operating Systems. They are the systems that run your computer.

An operating system, or "OS," is software that communicates with the hardware and allows other programs to run. It is comprised of system software, or the fundamental files your computer needs to boot up and function. Every desktop computer, tablet, and smartphone includes an operating system that provides basic functionality for the device.

[http://www.techterms.com/definition/operating\\_system](http://www.techterms.com/definition/operating_system)

Windows was created by Microsoft.  
(Founded by Bill Gates and Paul Allen)

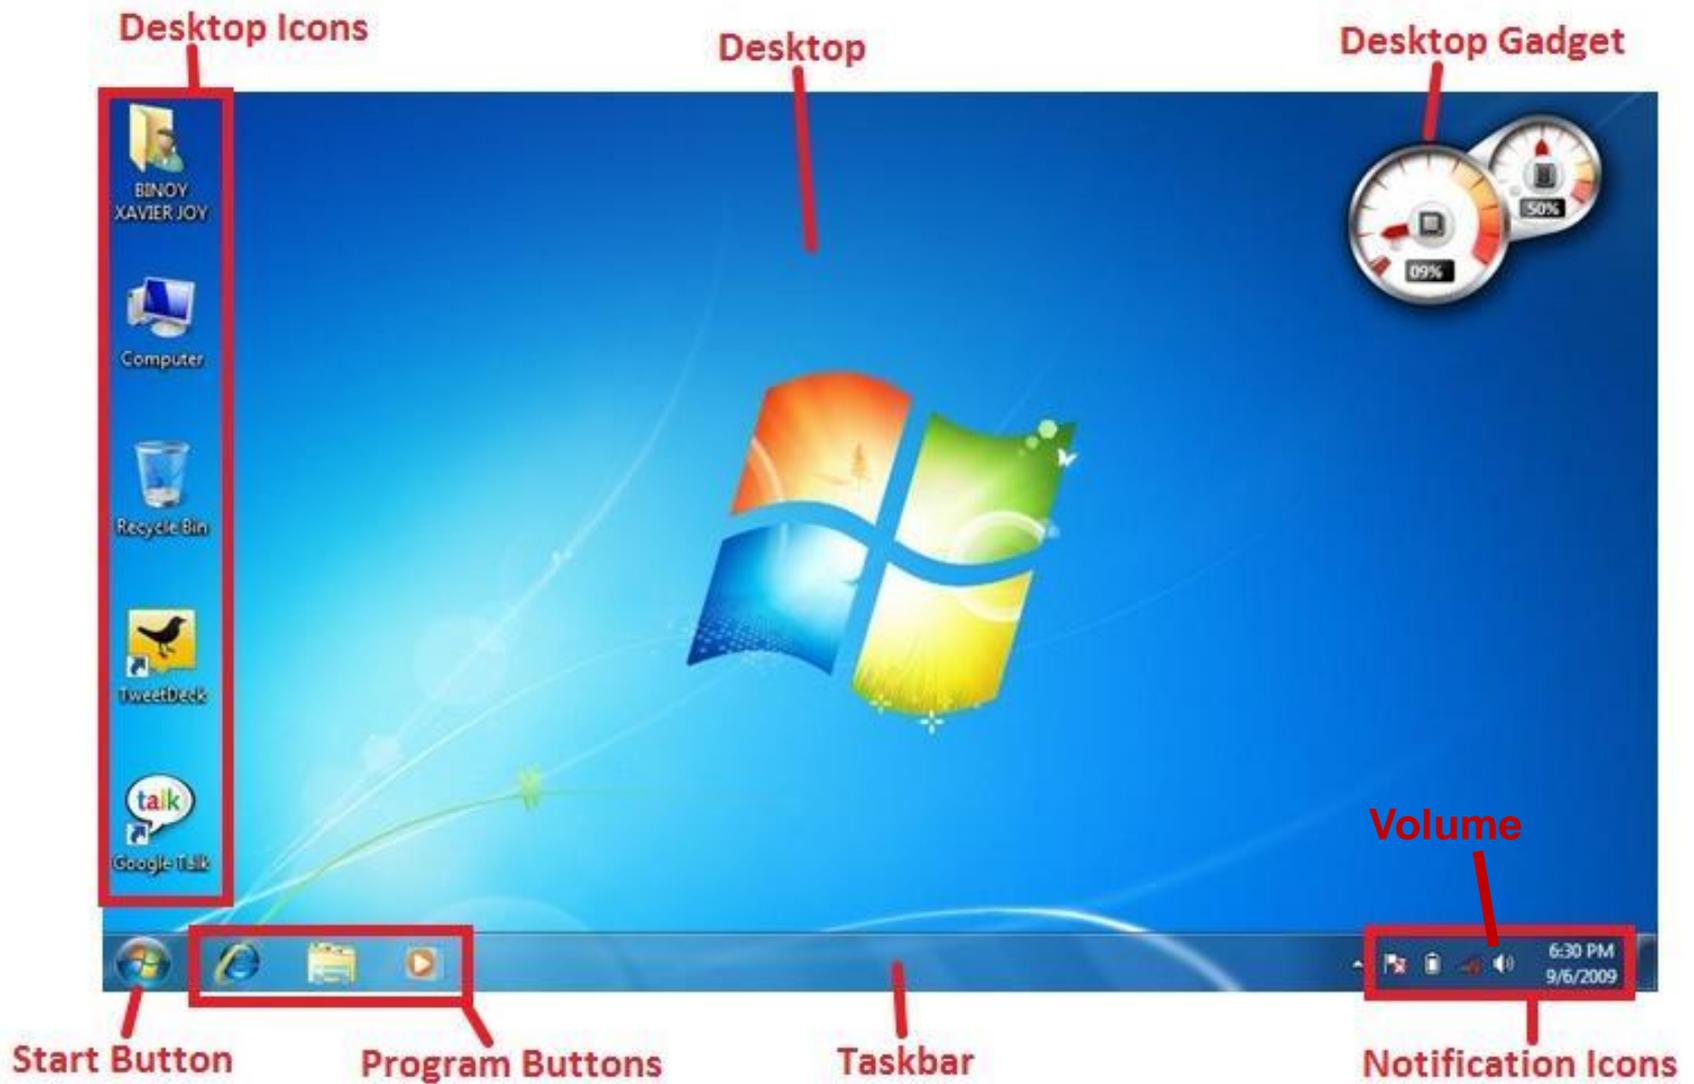

Over 90% of desktop computer users have Windows as their OS

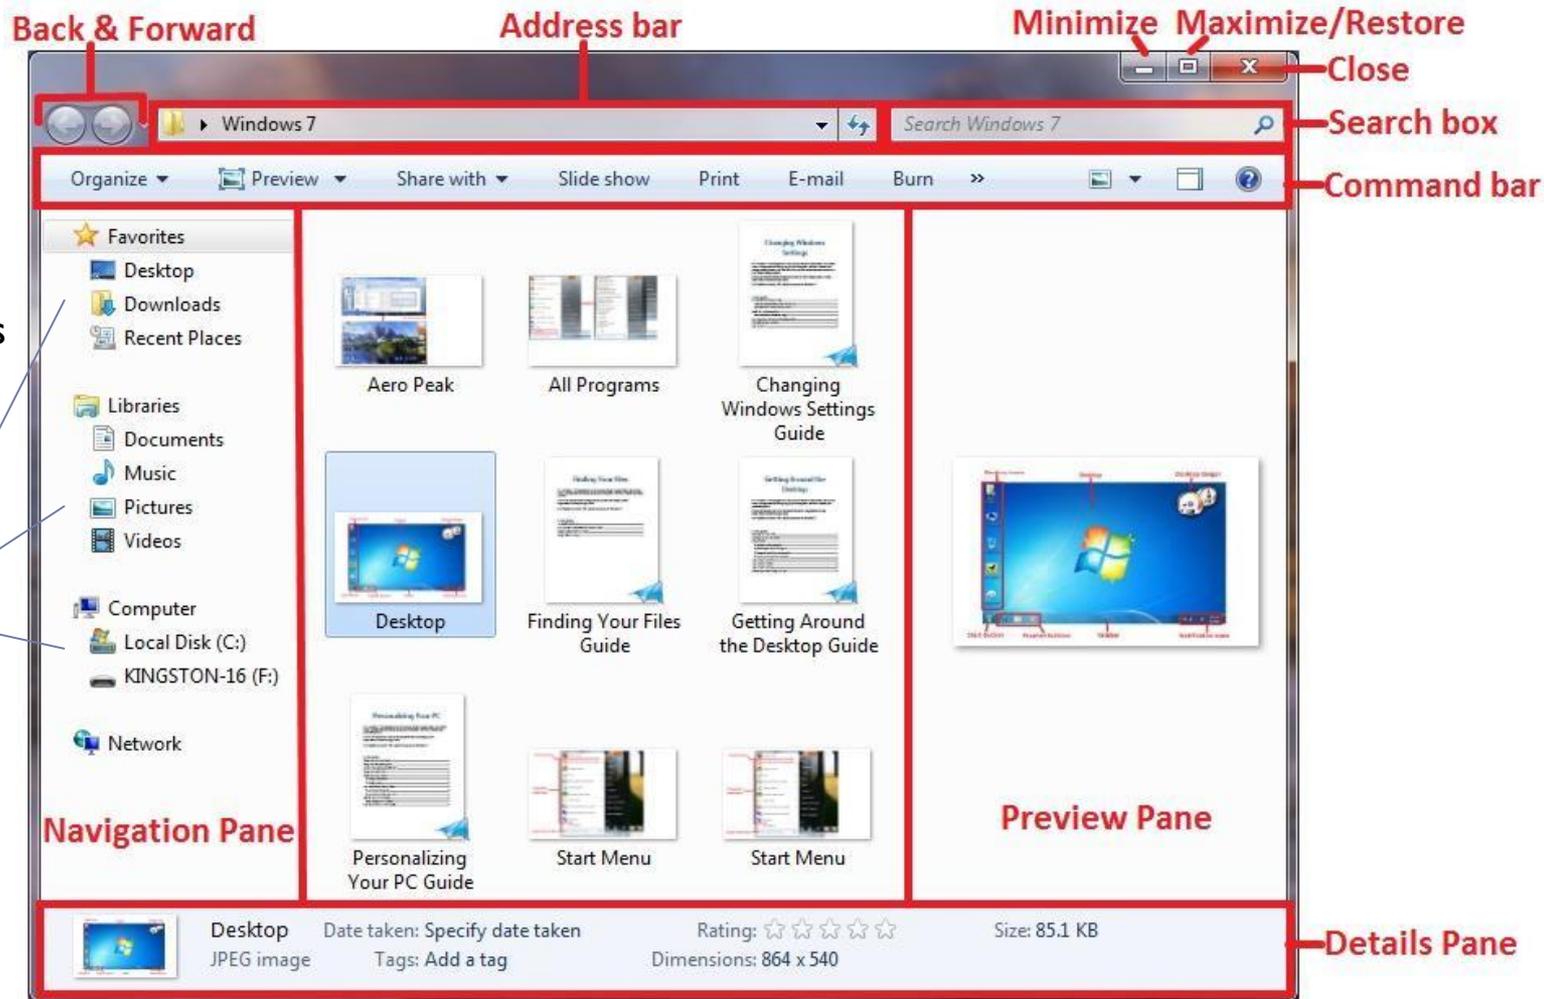

Mac was created by Apple  
(founded by Steve Jobs & Steve Wozniak)

7.25% of desktop users and 55% of mobile device users have Mac OSX

# Windows Desktop

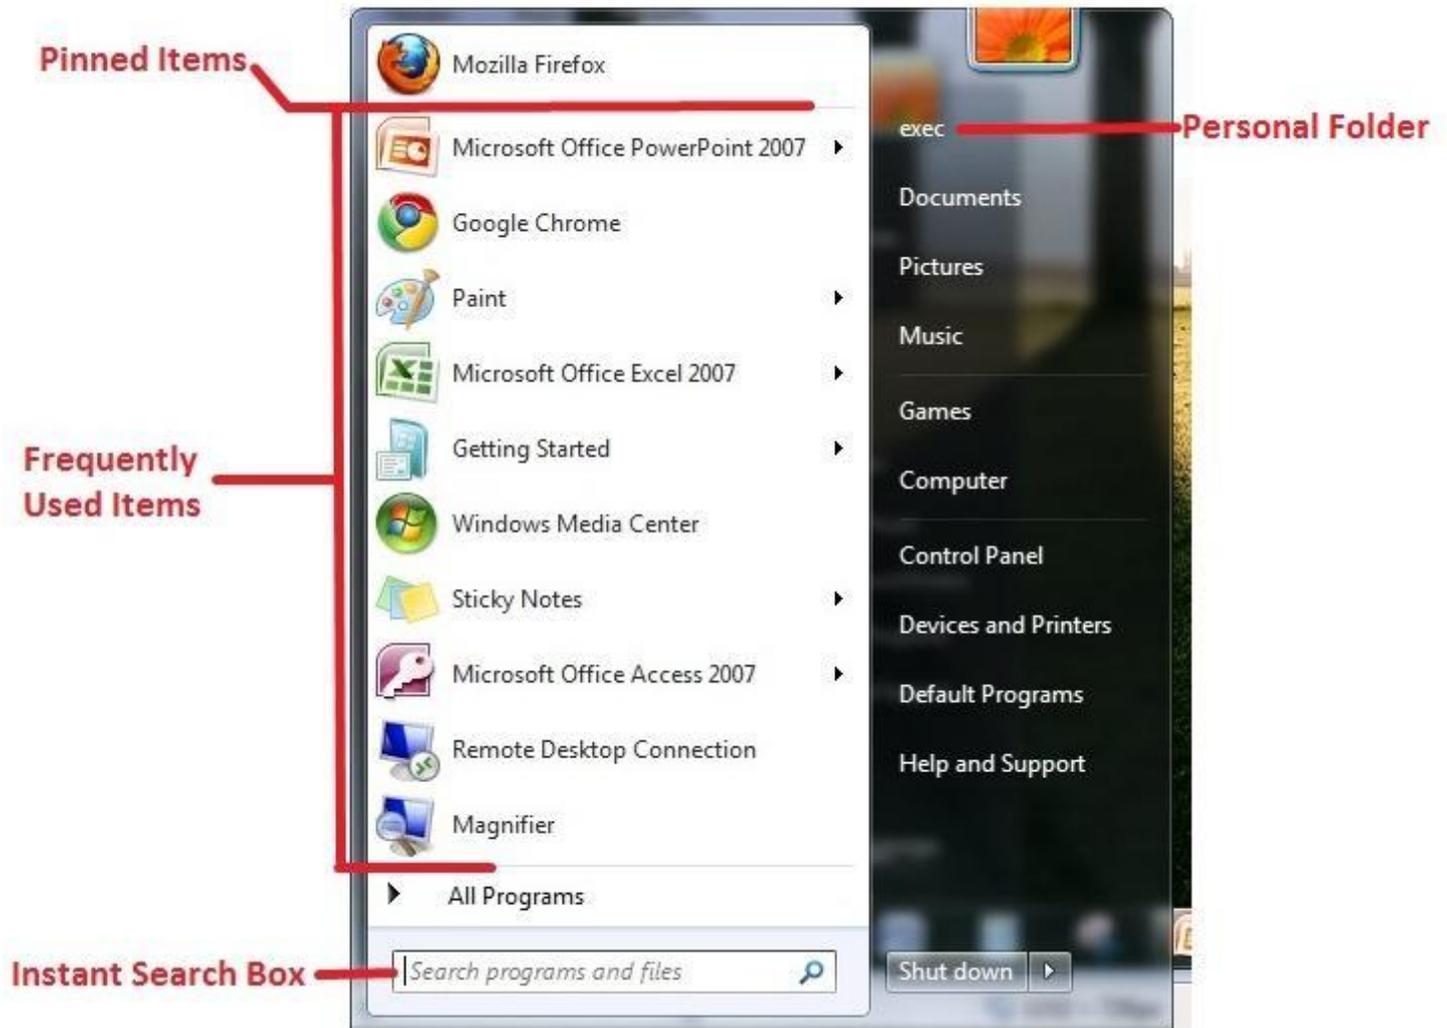

Windows Explorer acts as a filing cabinet on your computer that holds all of your files.

Files then hold documents, music, videos, etc.

# Protecting Your Computer

It's much easier for your computer to get a virus than it is for you to break it. Follow these tips to safeguard your computer from viruses and threats.

- Keep all your operating system and all software updated. Most virus and spyware attacks occur through security holes in popular software applications
- For your browser, use Firefox, Chrome or Safari rather than Internet Explorer (IE). Because IE is so popular, virus and spyware creators target security holes in IE
- Don't click on any pop ups or ads offering you anything for free
- Know the name and display of your antivirus program
- If something looks suspicious, **DO NOT** open it!

# Free software for keeping your computer safe!

Antivirus software that checks downloaded files & monitors websites for possible malware. Do not use more than one antivirus.

**AVAST**

Manual scan that searches out rootkits and other potential problems and threats

**Malwarebytes**

Spyware scanner to identify and remove spyware

**Spybot Search & Destroy**
